

Professional Profile:

- Bachelor's degree in Computer Science and Master's candidate in Strategic Software Engineering Management.
- Experience in the design, development, and implementation of software solutions, Android mobile applications, and backend services for corporate environments.
- Development and integration of web services and RESTful APIs, ensuring efficient and secure communication between mobile applications and backend platforms.
- Experience in high-demand technology projects for the National Tax Service, contributing to the development, maintenance, and improvement of critical systems.
- Advanced analytical skills focused on ensuring performance, consistency, and scalability in processing large volumes of data.
- Experience in integrating web services and RESTful APIs, ensuring efficient communication with backend servers.
- Knowledge of databases and backend development, including T-SQL, PostgreSQL, and prior experience in ABAP environments.
- Speaker at technology events such as Android Camp Cochabamba, GDG La Paz, Bolivian AI Hub, KotlinConf, and DevFest Bolivia, sharing technological knowledge.
- Programming tutor at UMSA and Elemental.
- Excellent technical leadership, teamwork, and problem-solving skills.

Education:

Bachelor's Degree in Computer Science

Universidad Mayor de San Andrés - UMSA

2017

Diploma in Application Development with Free Software

Escuela de Gestión Pública Plurinacional - EGPP

2017

Diploma in Networks and Cybersecurity

Universidad Franz Tamayo

2023

Master's Degree in Strategic Management in Software Engineering

Universidad Gabriel René Moreno – UGRM

2026

English Student

Centro Boliviano Americano – CBA

2025

Experience:

Software Professional – National Tax Service

May 2018 – July 2026

- Developed and maintained enterprise applications based on a microservices architecture defined by the General Directorate of Information and Communication Technologies (GTIC).
- Led the planning, architecture, and comprehensive development of the institution's mobile application ecosystem.
- Collaborated with business stakeholders and technical teams to analyze, design, and implement complex functional and regulatory requirements.
- Designed and integrated secure RESTful APIs with backend services that support the Bolivian National Tax Management System.
- Designed scalable relational and NoSQL database structures to support constantly evolving legal and

business requirements.

- Mentored junior developers and consultants, promoting clean code, software engineering best practices, and high technical standards.
- I participated in decisions regarding system architecture, performance optimization, code reviews, and technical planning.
- I delivered production-ready software, ensuring quality, maintainability, and adherence to project deadlines.

Programming Mentor – Elementary

June - August 2022

- Supporting students in their projects
- Coordinating with the tutoring team
- Assisting students in different groups

Mobile Developer – Hansa LTDA

August 2017 – April 2018

- Advanced T-SQL programming (SQL Server): Design and optimization of complex stored procedures, functions, and triggers for the efficient processing of the HBM application's transactional system.
- Monitoring and optimization of database performance, ensuring reduced query response times and data persistence.
- Ongoing maintenance, version control using Git, and implementation of live updates to the data structure.
- Implementation of continuous updates to improve functionality and user experience.

Teaching Assistant INF 161 - U.M.S.A.

March – June 2017

- Course INF-161 (Database Management Systems / Data Structures): Direct support in the teaching process and practical evaluation of student database projects.
- Collaboration with students on the course project.

Service Assistant - U.M.S.A. F.C.P.N.

March - Dec 2016

- Development of web pages with Wordpress.
- Development of web systems based on PHP and MySQL for the Faculty of Pure and Natural Sciences.
- Collaboration with the administrative staff of the faculty.

Rapid Transmission Assistant for Electoral Records - Supreme Electoral Tribunal

Feb 2016

- Support for the security and transmission chain of electoral records.
- Verification and rapid processing of records.
- Coordination with the team to ensure the accuracy and speed of electoral data transmission.
- Assistance in the preparation and logistics of electoral events.

Programming Tutor – U.M.S.A.

October 2016

- Technical assistance and personalized mentoring for students.
- Guidance in solving complex problems, debugging algorithms, and optimizing data structures.
- Ongoing coordination with the team of tutors and professors.

Volunteering:

Women TICS Bolivia

Active volunteer in women's empowerment projects in ICTs.

GDG La Paz Community

Member collaborating on GDG community projects and events.

Microsoft User Group Bolivia Community

Participant in the creation of resources and organization of educational sessions on the use of Microsoft.

Courses and Seminars:

2025: JAVA SPRING COURSE - Platzi - (16 hours of theory and practice).

2025: VUE.JS PRACTICE - Platzi - (16 hours of theory and practice).

2025: DOCKER COURSE: FUNDAMENTALS - Platzi - (12 hours of theory and practice).

2025: ANGULAR COURSE: COMPONENTS AND SERVICES - Platzi - (12 hours of theory and practice).

2025: JAVASCRIPT FROM SCRATCH COURSE - Platzi - (12 hours of theory and practice).

2017: Certificate of Completion for Oracle Database 12c: Administration Workshop - Cloud Edition, awarded by "TEKHNE International Training Academy and ORACLE University – Instructor: Eng. Carlos Peralta" (72 academic hours).

2017: Certificate of Completion for Oracle Database 12c DBAI Introduction to SQL, awarded by "TEKHNE International Training Academy and ORACLE University – Instructor: Eng. Carlos Peralta" (12 academic hours).

Knowledge and Skills:

Software Engineering and Data Architecture

- Development Languages: Java 11 (JDK), Kotlin 2.0.21, and Dart.
- Android Mobile Development: Implementation of technologies such as LiveData, ViewModel, Room, and Hilt for efficient lifecycle management, data persistence, and dependency injection.
- Software Architecture: Application of the Onion and MVVM patterns, promoting structured, maintainable, and highly cohesive development.
- Design Patterns: Implementation of patterns focused on code reuse, scalability, and quality.
- Project Management and Development: Use of Apache Maven for compilation, packaging, dependency management, and task automation in Java projects.
- Development Environments: IntelliJ IDEA, Android Studio, and Visual Studio Code for Java, Kotlin, and Dart development.
- REST service development: Using Spark Java as a microframework for creating lightweight and efficient APIs.
- Frontend development: Using JavaScript, TypeScript, HTML5, CSS3, Angular Material, and RxJS to develop modern web applications with Angular 19.
- Web development environment: Visual Studio Code as the primary IDE for building and maintaining web applications.
- Version control: Using GitLab for repository management, code versioning, and collaboration among development teams.
- Agile methodology: Applying the Scrum framework, using GitLab for planning, assigning, and tracking development tasks.
- Databases: Managing PostgreSQL 13 (relational) and MongoDB 7.0 (non-relational).
- Database client: DBeaver 5.2.0 for data administration and analysis.
- Continuous Integration and Deployment (CI/CD): Setting up automated pipelines for continuous integration and deployment in Java projects.
- Asynchronous Processing: Implementing queues and messaging using RabbitMQ and Apache Kafka for communication between services and background task execution.
- Testing and Deployment: Running automated tests with Firebase TestLab and publishing mobile applications on the Google Play Store.
- Consuming and developing REST API services.
- Operating System: Linux Mint as the primary development environment.
